

Forms by Qdabra

The Next Generation of InfoPath Form Development

The Only App That Reads InfoPath Templates (XSNs)

FormsViewer works with your existing form templates and data files. Maintaining backward compatibility means you can move 10, 20, 40, or even 80 form templates from InfoPath in one week. It's that easy. And, because time equals money, FormsViewer not only offers more features, but is also less expensive than any other solution on the market today. We guarantee it. You don't need to rebuild all of your forms when you migrate to Office 365 or SharePoint 2019. You can focus on the migration without InfoPath.

Do Your Forms Need A Future?

FormsViewer Breathes New Life Into Your Forms

FormsViewer adds features to bring your forms up to today's technology needs. Whether it's viewing on high-res devices or extracting tabular data to multiple lists for reporting or workflows, we've got you covered. Simply add a few rules to your forms and you can keep them current with today's technology. For example: want to print a PDF? That's just one simple command. How about authenticating external users via smart phone? Yes, you can do that too.

Qdabra Is A Proven Partner

For the last sixteen years we have helped organizations large and small build scalable solutions using Microsoft's technology. We are committed to the solutions we helped our customers build. That is why we built FormsViewer – to give our customers a future-proof option and buy more time to complete migrations. As consultants we build tools to reduce your project costs. FormsViewer started as a migration accelerator but our customers love it so we're adding more features. Our solution support guarantees the lowest cost tenant-wide pricing and quarterly software updates. For example, next year we plan to integrate AI assistants and voice approvals.

FormsViewer Licensing Options

The majority of forms migrate with no modification. Send us your most complex forms and we'll send you an assessment. We can quickly generate a report to outline what changes, if any, your forms will need to move them over to FormsViewer. Of course, since we won't change the format, they'll continue to be backward compatible too. Qdabra guarantees all forms will migrate to FormsViewer.
